25X1A

2. Comment. Information on the arrival of supplies from the USSR in December and January corresponds with regular reports from the border-crossing points. Figures listed in reports on border-crossing traffic in February and March are higher than those listed in other reports. It is assumed that shipments originally bound for the Muellrose depot were dispatched to army and unit workshops already from the border.

25X1A

3. Comment. Incoming and outgoing shipments during the period of observation included 370 incoming carloads and 304 outgoing carloads in December 1952, 261 incoming carloads and 160 outgoing carloads in January 1953, 236 incoming carloads and 158 outgoing carloads in February 1953, and 230 incoming carloads and 200 outgoing carloads in March 1953. The rate of supply traffic at the depot was about that of the preceding months. The decrease of outgoing shipments after January 1953 is interpreted by the fact that, due to individual training until mid-March, the number of damaged tanks at the repair shops was low. It is of interest that 40 to 50 percent of the spare parts delivered were produced in East Germany.
